Dear foster:
    Excuse me! Can you give me help? I have run the TIEGCM model to simulate electron density, but in some cases, there are some unexpected results. Maybe it's the reason that the model haven't run stable.
    Can you tell me how to set the model running in 3 days for now I can only set the model running in 1 day. If I set the advaned_day=3 in
the .inp file , The model cann't run.
    I'm looking forward to your reply!Thank you!
